ElidEx

Hidden knowledge? No thank you!

Bilal Vandenberge · Manuel Rocca · Haluk Yilmaz · Matteo Morbée

01 · THE APPROACH

Our solution

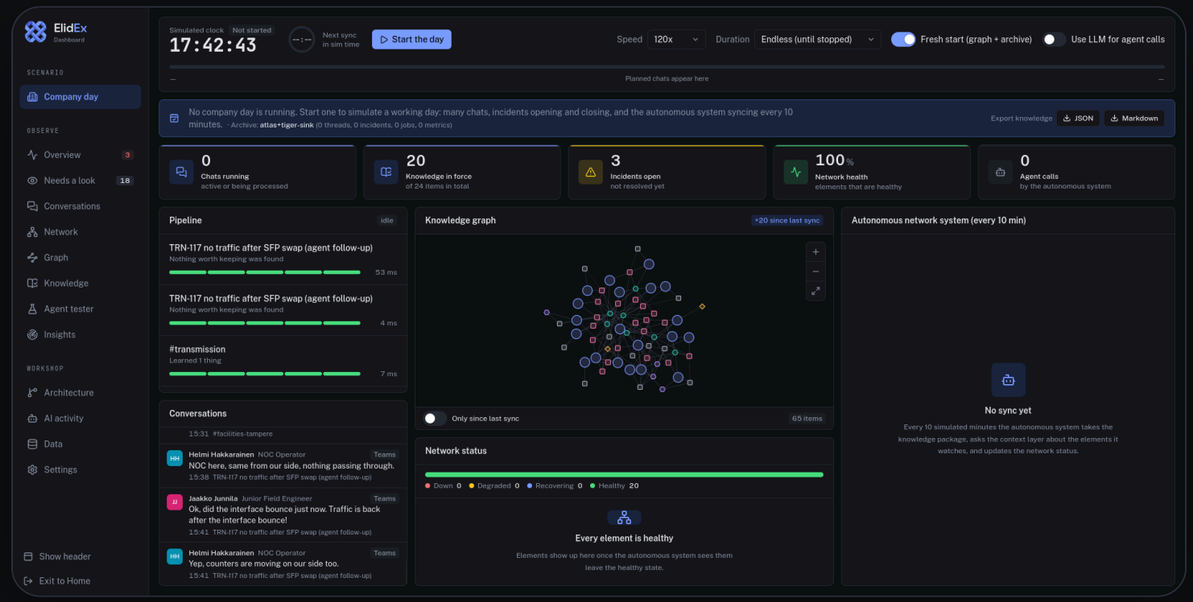

Turn conversations into context an agent can use.

Capture → Link → Reuse

02 · WHAT IS ELIDEX?

AI powered web app

- Read emails and Slack chats
- Extract hidden knowledge
- Link to network entities
- Build a knowledge graph dynamically

Keep the advice.
Keep its context.

1 · Slack ingestion

Filter human messages, resolve the author and role, and map messages to threads.

→

2 · Debounce + schedule

Wait for the thread to go quiet, then launch a locked pipeline job.

→

3 · LLM extraction

Read the full thread and extract structured operational rules and facts.

→

4 · Critic verification

Check that quotes exist; review scope and support, then keep, downgrade or reject.

↓

5 · Precision linking

Verify speaker and inventory matches; bind target, observation and trigger, or abstain.

→

6 · Store + deduplicate

Retract stale thread results; merge matching knowledge or store a new assertion.

→

7 · Judge + reconcile

Compare nearby rules; record support, conflict or supersession and close covered rules.

→

8 · Graph projection

Link assertions to source messages, people, equipment, classes, sites and lifecycle.

04 · THE OUTCOME

Business impact

Make specialist knowledge available
at the moment an agent needs it.

05 · ADVANTAGES FOR ELISA

More value from knowledge you already have.

01 **Stable.** Enhances network operability.

02 **Smart.** Requires no input from Elisa specialists.

03 **Trustworthy.** Provides evidence behind each knowledge item and its confidence level.

04 **Usability.** An autonomous system with a complete dashboard.

06 · READY FOR ELISA OPERATIONS

Our knowledge base is exportable

JSON | Markdown | CSV | GraphML | JSON-LD

Ready for any agentic operations

07 · CONCLUSION

Interested by our Human-out-of-the-Loop system?

We'd love to continue the project.
